# Embedded Software Developer (m/f/d)

We are a unique team of software developers, system engineers, IT specialists and marketing & sales experts who all share a common goal: We want to develop the future!

## Your Profile:

For you, developing software for embedded systems is more than a job and you can show projects you are proud of?

Thanks to your C++ as well as Windows and Linux skills and your knowledge in the areas of µController programming, control of hardware components, driver development or control of hardware interfaces, you can turn concepts and ideas into a top class experience?

Is written and spoken English no problem for you and do you have a class B driver's license?

## Your Tasks:

You create innovative software in C++ or C# and work in embedded software development.

You develop trend-setting technical software under Windows, Linux and different real-time operating systems with creative and motivated colleagues in a team.

You collaborate on internal and external development projects and take these projects forward.

You actively contribute to your team and to the success of TSEP through your commitment.

## Our Offer:

► Working in a family-run company, with nice, motivated and communicative colleagues
► An attractive, modern and bright workplace in Wolnzach, in the middle of the Hallertau
► Free drinks (sparkling water, coffee) and fresh organic fruit
► Flexible working time models: whether it's a 4-day week, 35-hour week, part-time or mobile work, we're open to everything
► We support you with the integration into our team, no matter whether you are moving, looking for an apartment, residence permit/visa or other administrative procedure

Apply to us and become part of the TSEP family!
